COUGH

COUGH

If you've had a cough for more than three weeks, and it isn't going away, your GP wants to see you. Chances are it's nothing serious, but a persistent cough that doesn't clear up can be a sign of lung cancer. There's lots that can be done to treat lung cancer these days, especially if it's found early, so it's better to get it checked out.

**DON'T GET SCARED, GET CHECKED.**
