

AHEM TESTED NEGATIVE
FOR COVID BUT STILL
HAVE A *COUGH COUGH*
PERSISTENT COUGH?

AN EARLY SIGN OF LUNG CANCER
CAN BE A NEW OR DIFFERENT
PERSISTENT COUGH THAT
LASTS FOR 3 WEEKS OR MORE.

Don't put off contacting your GP practice if
you have symptoms, especially if you are
over 40. The earlier lung cancer is found the
better and a lot can be done to treat it.
